

THE MATH EQUALIZER

Coordinate Grids

- A coordinate plane contains both an **X and Y axis**
- The **X axis** runs horizontally, **across** the coordinate plane
- The **Y axis** runs vertically, **up and down** the coordinate plane
- In coordinate pair, the first number represents the number across on the X axis and the second pair represent the number up and down on the Y axis (X, Y)
- Coordinate pairs follow the **Superman Rule**, he must run first, before he can fly (across, up and down)
